Using MeasureUp

Complete the following activities to get the most from the MeasureUp resource.

Explore the Different Testing Modes of MeasureUp

- **Study Mode**: Tests administered in study mode allow you to request the correct answer and explanation for each question during the test. These tests are not timed. You can modify the testing environment during the test.
- **Certification Mode**: Tests administered in certification mode closely simulate the actual testing environment you will encounter when taking a certification exam. These tests do not allow you to request the correct answer and explanation for each question until after you have completed the test.
- **Customize Your Test**: Custom mode allows you to specify your preferred testing environment. Use this mode to specify the objectives you want during the test: the timer length and other test properties.
- **Adaptive Mode**: Tests administered in adaptive mode closely simulate the actual testing environment you will encounter taking an adaptive test. After answering a question, you will not be allowed to go back; you are only allowed to move forward in this mode.

Study Tips

1. Start with the exam in Certification Mode. Use the results to determine the areas you need to spend the most time studying.
2. Use Study Mode to get immediate explanations for wrong answers so you can go back and continue studying the material you missed.
3. After completing the coursework, take the exam in Certification Mode again, and then in Adaptive Mode to test your knowledge.
4. Do not memorize correct answers, understand and comprehend why an answer is right or wrong.
